ESIF definition of the trend based projections states:

*These projections are an indication of the future trends in population by age and sex over the next 25 years. They are trend-based projections, which make assumptions about future fertility, mortality and migration levels based on trends in recent estimates, usually a five-year reference period. They show what the population will be if recent trends in these continue. These projections do not take into account local housing provision policies.*

*\* this figure is based on the number of people available for work (economically active) in the population*

*\*\* this is based on the number of B1 B2 and B8 type jobs as a percentage of all employment opportunities in Eastbourne in 2010 (based on economically active)*

*\*\*\* this is based on the number of B1 type occupations as a percentage of all B-space jobs in Eastbourne in 2010 (based on economically active)*

*\*\*\*\* this is based on the number of employees in B1 employment in 2008 divided into the amount of B1 space in 2008 in Eastbourne.*
