

THIS DRAWING IS TO BE USED ONLY FOR THE PURPOSE OF ISSUE THAT IT WAS ISSUED FOR AND IS SUBJECT TO AMENDMENT

- LEGEND**
- Lewes DC Boundary
 - Locations of groundwater flooding incidents as reported by LDC
 - A: Limited potential for groundwater flooding to occur
 - B: Potential for groundwater flooding of property situated below ground level
 - C: Potential for groundwater flooding to occur at surface

NOTES

1. This map shows the areas susceptible to groundwater flooding based on the British Geological Survey's Groundwater Flooding dataset.
2. The British Geological Survey has utilised hydrogeological and geological information to classify areas into one of three susceptibility classes. Outside of these areas the rock type is deemed not to be prone to groundwater flooding.
3. All three susceptibility classes are based on rock type and estimated groundwater levels during periods of extended intense rainfall. The three classes are as follows:
 A Limited potential for groundwater flooding to occur:
 B Potential for groundwater flooding of property situated below ground level
 C Potential for groundwater flooding to occur at surface
4. For the latter two classes, you are advised to check that groundwater flooding has not been a problem in the past at this location and/or that measures are in place to sufficiently reduce the impact of the flooding.
